

STANDARDS CATALOGUE

Introduction

This is the February 2026 version of the CARICOM Regional Organisation for Standards and Quality (CROSQ) Standards Catalogue. CROSQ is the cooperative network of the National Standards Bureaux (NSB) of the 15 Member States of CARICOM which are namely: Antigua and Barbuda, the Commonwealth of the Bahamas, the Republic of Barbados, Belize, the Commonwealth of Dominica, Grenada, the Democratic Republic of Guyana, the Republic of Haiti, Jamaica, Montserrat, the Federation of St. Kitts and Nevis, Saint Lucia, St. Vincent & the Grenadines, the Republic of Suriname and the Republic of Trinidad & Tobago. The CROSQ was constituted by an Inter-Governmental Agreement signed in 2002. It has its legal status under Article 67 of The Revised Treaty of Chaguaramas, which is the treaty which establishes the Caribbean Community including the CARICOM Single Market and Economy.

The principal functions of the CROSQ are as follows:

- To develop a standardisation programme consistent with the international obligations of the Member States.

The standardisation programme has the following objectives:

- (a) trade facilitation;
- (b) enhanced efficiency in the production and delivery of goods and services;
- (c) improved quality of goods and services traded within the Community and with third States; and
- (d) consumer and environmental protection

The standardisation programme shall include the following elements:

- (a) harmonisation of standards and technical regulations, and transparency in the development and promulgation of standards and technical regulations;
- (b) recognition of conformity assessment procedures through mutual recognition agreements or other means;
- (c) facilitation of standards infrastructure development at the national and regional levels;
- (d) facilitation of metrology infrastructure development; and
- (e) arrangements for the exchange of information with respect to the development and implementation of standards and technical regulations among the parties to this Treaty.

The Regional Standards Development is managed by a Technical Management Committee (TMC), which is a Technical Committee of the CROSQ Council and is made up of the Heads of the Standards Development Department of the NSBs.

The Regional Standards Development is guided by the following WTO/ISO Principles:

- Openness
- Consensus and impartiality
- Transparency
- Coherence
- Market relevance and Effectiveness
- Due Process
- Stakeholder Engagement

This document, the CROSQ Standards Catalogue, contains bibliographic information of all CARICOM Regional Standards (CRS) developed by the CROSQ from its inception in 2002. The standards cover several areas, such as Labelling, Processed Foods, Agricultural Produce, and Energy, to name a few. The records contain information on the title, CRS number, price and an abstract of the standard. The standards are classified according to the International Classification for Standards (ICS).

Standards Index

#	<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard Code</u>	<u>Price</u>
<u>AGRICULTURE</u>				
<u>Produce</u>				
1	Bananas	Specification for Grades of Fresh Agricultural Produce – Part 1: Bananas	CRS 24-Part 1: 2021	USD 36.00
2	Cabbages	Specification for Grades of Fresh Agricultural Produce – Part 2: Cabbages	CRS 24-Part 2: 2010	USD 34.06
3	Grapefruits	Specification for Grades of Fresh Agricultural Produce – Part 3: Grapefruits	CRS 24-Part 3: 2010	USD 36.97
4	Hot Peppers	Specification for Grades of Fresh Agricultural Produce – Part 4: Hot Peppers	CRS 24-Part 4: 2010	USD 34.06
5	Mangoes	Specification for Grades of Fresh Agricultural Produce – Part 5: Mangoes	CRS 24-Part 5: 2010	USD 35.03
6	Oranges	Specification for Grades of Fresh Agricultural Produce – Part 6: Oranges	CRS 24-Part 6: 2010	USD 36.97
7	Pineapples	Specification for Grades of Fresh Agricultural Produce – Part 7: Pineapples	CRS 24-Part 7: 2010	USD 36.00
8	Pumpkin	Specification for Grades of Fresh Agricultural Produce – Part 8: Pumpkin	CRS 24-Part 8: 2010	USD 34.06
9	Sweet Potatoes	Specification for Grades of Fresh Agricultural Produce – Part 9: Sweet Peppers	CRS 24-Part 9: 2010	USD 35.03
10	Tomatoes	Specification for Grades of Fresh Agricultural Produce – Part 10: Tomatoes	CRS 24-Part 10: 2010	USD 36.97
11	Organic Production	CARICOM Regional Code of Practice for Organic Production and Processing	CRCP CRS 9: 2014	USD 106.81
12	Compost	Compost - Requirements	CRS 86:2025	USD 43.76

<u>Fisheries</u>				
13	Fish	Code of Practice of Fish and Fishery Products	CRCP 4: 2010	USD 198.96
<u>Livestock</u>				
14	Poultry Products	CARICOM Standard for Poultry Meats and Poultry Produce	CRS 28: 2012	USD 48.70
15	Poultry Feed	Specification for Poultry Feed and Feed Ingredients	CRS 29: 2011	USD 66.07

AGRICULTURE

Sub-Section: Fresh Produce

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard Code</u>	<u>Price</u>
Banana	Specification for Grades of Fresh Agricultural Produce – Part 1: Bananas	CRS 24 –Part 1: 2021	USD 36.00

Abstract:

This CARICOM Regional Standard has been prepared to improve the regional and international market competitiveness of bananas and to address critical concerns relating to quality in the production, processing and packaging of bananas in the region.

These measures are expected to assist all stakeholders engaged in the production, packaging, distribution and sale of bananas in ensuring compliance with minimum requirements for bananas for commercial use.

This regional standard has been developed in an effort to:

- avoid misunderstanding and confusion among those involved in the marketing chain;
- provide an objective basis for relating price with quality;
- encourage better selection, packaging and presentation of produce as a means of obtaining greater income overall; and
- assist exporters and their countries in meeting export market requirements and thereby enhancing their reputation and market position.

This standard specifies the requirements for bananas grown from *Musa spp.* (AAA) of the *Musaceae* family, to be supplied fresh to the consumer, after preparation and packaging. It also specifies the requirements for un-ripened green bananas after preparation and packaging.

NOTE Varieties covered by this standard include *Cavendish* and *Robusta*

This standard does not specify requirements for bananas intended for cooking only, including plantains or those used for industrial processing.

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Organic Production	CARICOM Regional Code of Practice for Organic Production and Processing	CRCP 9:2014	USD 106.81
<p>Abstract</p> <p>This Code of Practice describes the requirements for organic production. It covers plant production, animal husbandry, beekeeping, collection of wild products and aquaculture, and also the processing and labelling of products derived from these activities. It provides a mechanism to define the expectations for organic production. It applies to any operator involved in activities, at any stage of production, preparation, processing and distribution, relating to the organic products. When complied with, it also enables producers to label their products as organic.</p> <p>A product will be regarded as bearing indications referring to organic production methods where, in the labelling or claims, including advertising material or commercial documents, the product, or its ingredients, is described by the terms "organic", "biodynamic", "biological", "ecological", or words of similar intent including diminutives which, in the country where the product is placed on the market, suggests to the purchaser that the product or its ingredients were obtained according to organic production methods.</p> <p>This Code of Practice applies without prejudice to other regional or national provisions governing the production, preparation, processing, marketing, labelling, inspection and control, including legislation on foodstuffs and animal nutrition of the products specified herein. Requirements in this Code of Practice are intended to be complementary and additional to other health, agricultural, environmental, food and production related regulatory requirements of law or standards at regional, national or other relevant levels.</p> <p>This Code of Practice also outlines specifications for allowed inputs and approved products.</p>

Sub-Section: Fisheries

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Fish	Code of Practice for Fish & Fishery Products	CRCP 4: 2010	USD 198.96

Abstract:

This Code of Practice recommends general guidelines on the production, storage and handling of fish and fishery products on board fishing vessels and on shore. It incorporates the Hazard Analysis Critical Control Point (HACCP) approach, which is recommended to ensure the hygienic production of fish and fishery products to meet health and safety requirements.

A pre-requisite programme is described in the Code of Practice covering technological guidelines and the essential requirements of hygiene in the production of fish, shellfish and their products, which are safe for human consumption, and otherwise meets the requirements of the appropriate CODEX Alimentarius Commission product standards.

This Code of Practice will assist all those who are engaged in the handling and production of fish and fishery products, or are concerned with their storage, distribution, export, import and sale in attaining safe and wholesome products which can be sold on national or international markets and meet the requirements of the CODEX Alimentarius Commission Standards.

This Code of Practice applies to the growing, harvesting, handling, production, processing, storage transportation and retail sale of fish, shellfish and aquatic invertebrates and products from marine and freshwater sources, which are intended for human consumption.

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Poultry	CARICOM Standard Specification for Poultry Meats and Poultry Products	CRS 28: 2012	USD 48.70

Abstract:

This CARICOM Regional Standard provides guidance to poultry producers, processors and end users of the product on the requirements of the commodity in areas of grading, the dressing operation, hygiene, sanitation and food safety, to facilitate trade and market access whilst safeguarding the health and welfare of CARICOM nationals and their customers.

This standard specifies requirements for primary processed poultry consisting of carcasses, poultry parts and poultry products for human consumption. It defines and distinguishes between the market classes of poultry. Requirements for sanitation, plant hygiene, the dressing operation, grading, packaging, labelling and marketing as well as ante-mortem and post-mortem inspection of poultry products sold through commercial distribution systems are also established.

This standard does not apply to freshly killed poultry prepared for direct sale to consumers and for which conditions may be prescribed in National Regulations.

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Poultry Feed	Specification for Poultry Feed and Feed Ingredients	CRS 29:2011	USD 66.07

Abstract:

This standard is designed to:

- ensure that poultry animals, used either as poultry meat or for the production of eggs used for human food, are fed rations, which are appropriate for the category of bird; and
- help to ensure the safety of food for human consumption through adherence to recommended poultry feeding practice at the farm level and good manufacturing practices during the procurement, handling, storage, processing and distribution of poultry feed and feed ingredients.

The standard establishes specifications for nutrient requirements in the rations fed to poultry. It provides guidance on good manufacturing practices for the production of poultry feeds and good on-farm feeding practices. It applies to the production and use of all materials designed for poultry feed and feed ingredients at all levels, whether produced industrially or on farm.

Carbonated Beverages	Carbonated Beverages – Specification	CRS 53: 2018	USD 58.31
<p>Abstract: Within the CARICOM Community, the carbonated beverage industry is one of the largest segments of the local food processing sector. Its products are among those likely to be extensively traded within the region. This standard has been developed to ensure safety and uniformity in the quality of these products. The quality of a carbonated beverage depends on the quality of the various ingredients that go into its manufacture – water, acidulants, sweetening agents, flavours, colours and carbon dioxide being the most important ones.</p> <p>The hygienic condition of the units producing carbonated beverages also requires vigilant control to safeguard public health. These standard details requirements for the various ingredients as well as the end product. The minimum hygienic conditions, which need to be maintained in a carbonated beverage establishment, have also been stipulated.</p> <p>This standard prescribes the compositional, safety, packaging, labelling, quality and testing requirements for carbonated beverages; with a view of harmonizing and facilitating fair intra and extra regional trade.</p> <p>The standard does not include the following: waters (including mineral waters), fruit drinks, cereal based beverages, herbal beverages, energy drinks or juices.</p>

Water	Code of Practice for Packaged Water	CRCP 1: 2010	USD 42.79
<p>Abstract: In several CARICOM Member States, water from springs or other natural sources is packaged and sold. There are many underground reservoirs which have not been exposed to any pollution and can be exploited to satisfy a growing demand for natural pure water or water containing certain minerals. Purified waters from other sources are also entering the trade and it is now desirable to set guidelines for the production and promotion of such products.</p> <p>This Code of Practice recommends appropriate general techniques for collecting, processing, packaging, storing, transporting, distributing and offering for sale, all bottled or packaged drinking water for direct consumption.</p>			

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Water	Specification for Packaged Water	CRS 1: 2010	USD 41.82
<p>Abstract: This standard has been prepared to set levels of quality and safety for packaged water (natural mineral water, spring water and purified water) produced and traded in CARICOM Member States.</p> <p>In several CARICOM Member States, water from springs or other natural sources is packaged and sold. There are many underground reservoirs which have not been exposed to any pollution and can be exploited to satisfy a growing demand for natural pure water or water containing certain minerals. Purified waters from other sources are also entering the trade and it is now desirable to set guidelines for the production and promotion of such products.</p> <p>This regional standard specifies requirements for the purity, treatment, bacteriological acceptability, packaging and labelling of all waters that are pre-packaged for sale and used as beverages or in foods.</p> <p>The standard does not apply to water distributed by the public water supply system, to carbonated beverages, soda water or to packaged water sold for purposes other than as a beverage.</p> <p>The standard should be used in conjunction with CRCP 1, Code of Hygienic Practice for Packaged Water.</p>

Air Conditioners	Energy Labelling – Air Conditioners – Requirements	CRS 58: 2019	USD 34.06
<p>Abstract</p> <p>The standard is intended to improve the energy performance of air conditioners. The application of the standard is expected to improve energy efficiency within CARICOM Member States via the availability, selection and usage of more energy efficient air conditioners. The information given on the energy label provides consumers with information for consideration when making a purchasing decision.</p> <p>In addition, the requirements of this standard is expected to drive manufacturers, importers and retailers to provide more energy efficient air conditioner options to consumers, as they compete to offer better value for money. It is envisaged that CARICOM Member States will commit to reference these requirements in legislation, in order to accelerate the market place transition to more energy efficient air conditioners.</p> <p>This standard is aligned with the CARICOM Energy Policy and its objectives which state, inter alia:</p> <ul style="list-style-type: none"> — increase energy efficiency and conservation in all sectors; and — establishment and enforcement of labelling and standards for the importation of electrical appliances. 			

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Building Code	CARICOM Regional Energy Efficiency Building Code 2018		USD 175:00
<p>Abstract</p> <p>Countries of the Caribbean Community (CARICOM) meet at least 95 percent of electricity generation needs through the use of imported fossil fuel. This dependency, particularly for commerce and manufacturing have restricted global competitiveness, escalated indebtedness and increased potential for environmental harm. Additionally, the impact of global warming and climate change threatens to exacerbate these conditions, through increased energy demand and subsequent heightening of inefficiencies in electricity generating plants. Recognizing that the adoption rates of more effectual technologies for renewable energy and energy conservation and efficiency are low and require political will, private sector input and technical expertise, the CARICOM Energy Unit, as part of the CARICOM Energy Programme, is implementing a Caribbean Sustainable Energy Roadmap and Strategy (C-SERM). This C-SERM was developed to action the CARICOM Energy Policy.</p> <p>To meet one of the objectives of the Caribbean Sustainable Energy Roadmap and Strategy and to execute a directive issued by the 41st Special Meeting of the Council of Trade and Economic Development (COTED) on Energy held in Trinidad and Tobago, in April 2013, the CARICOM Regional Organisation for Standards and Quality (CROSQ) commenced the development of the CARICOM Regional Energy Efficiency Building Code (CREEBC).</p> <p>The 2018 CARICOM Regional Energy Efficiency Building Code (CREEBC) is an adaptation of the International Energy Conservation Code®, 2018 Edition, published by the International Code Council. This CREEBC is meant to specifically meet the needs of the Caribbean and other countries in a tropical environment. It establishes minimum energy efficiency requirements for buildings using prescriptive and performance-related provisions inclusive of building envelope, cooling system, ventilation, pumping, lighting and the service water-heating systems in buildings. The technical requirements of this code are the product of regional and international expertise.</p>

Solar Water Heaters	CRS/ICC 900/SCRCC 300-2020: CARICOM Regional Standard - ICC Solar Thermal System - CAD	CRS/ICC 900/SCRCC 300- 2021	USD 36.97
<p>Abstract: This CARICOM Regional Standard CRS/ICC 900/SRCC 300- 2020 CARICOM Application Document for the ICC Solar Thermal System Standard has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ). This document represents the modifications to the ICC Solar Thermal System Standard that are applicable to the CARICOM region when using the ICC Solar Thermal System Standard. This document was approved as a CARICOM Regional Standard by the CARICOM Council for Trade and Economic Development (COTED) at its 53rd Meeting in November 2021</p> <p>This standard is intended to provide the minimum criteria for the design and installation of solar thermal systems. Furthermore, it describes the requirements and methodology for standardised solar thermal system design evaluation, including the analytical evaluation of its components.</p> <p>The resulting document provides appropriate protections for health, safety and welfare while avoiding unnecessary restrictions on the use of new materials, technologies or designs.</p>			

This document is to be read in conjunction with the ICC 900/SRCC 300- 2020 Solar Thermal System Standard substituting the relevant clauses of the CAD in the ICC as applicable.

Applicable Version of the ICC 900/SRCC 300- 2020 Solar Thermal System Standard

This Application Document is based on the 2020 version of the International Conservation Code ICC Solar Thermal System Standard. It shall be read in conjunction with this version of the ICC 900/SRCC 300- 2020 Solar Thermal System Standard, herein after referred to as ICC 900/ SRCC 300.

Subsequent versions of the ICC 900/SRCC 300 may require subsequent versions of this Application Document. This document is intended to be reviewed on a six-year cycle.

Use and Structure

Users wishing to apply the ICC 900/SRCC 300 in CARICOM must first consult this Application Document to get guidance on what applies, alternate compliance paths, additional data and information that applies only to CARICOM.

The structure of this CARICOM application document references only the sections of the ICC 900/SRCC 300 which have been amended. The numbering system of the chapters is also maintained as far as is practicable.

Section and sub-section titles and numbering system are maintained according to the following:

1. Where there are regional requirements, the section and/or sub-section number and title along with the appropriate clause are included in this Application Document.
2. The number and title of sections and sub-sections follow the numbering sequence of the ICC 900/SRCC 300;

Indigenous Furniture	Specification for Indigenous Furniture (bamboo, rattan, wicker and nibbi)	CRS 21: 2010	USD 37.94

Abstract:

This CARICOM Regional Standard was developed as part of the CROSQ project entitled “*Promoting the competitiveness of small and medium-sized enterprises through regional standards*”, funded by the Inter-American Development Bank.

Furniture made from indigenous materials other than wood and manufactured in the Caribbean is traded intra and extra regionally. This standard will benefit manufacturers by the harmonization of requirements for the manufacture of various types of furniture, suitable for both domestic and commercial use.

This standard specifies the requirements for indigenous furniture, namely those made from bamboo, rattan, wicker, tibisiri and nibbi materials

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Wooden Furniture	Specification for Wooden Furniture	CRS 20: 2010	USD 47.64

Abstract:

This CARICOM Regional Standard has been prepared to provide guidance to the furniture manufacturing industry. The quality of a piece of furniture is very dependent on the quality of materials used and the workmanship employed during manufacture and this standard provides the requirements necessary to benchmark the industry in these areas.

This standard specifies the requirements for the materials, construction, workmanship and finish employed in the manufacture of all types of wooden furniture.

Aerosol	Labelling of Retail Packages of Aerosol Insecticides	CRS 37:2011	USD 36.97

Abstract:

This standard specifies the labelling requirements for aerosol insecticides in pressurised dispensers intended for household use.

All manufacturers, importers, distributors and other entities engaged in the production and or trade of retail packages of aerosol insecticides within any Member State of the Caribbean Community shall comply with the requirements of this standard.

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Brewed Products	Labelling of Brewed Products	CRS 40: 2016 (revised)	USD 33.09

Abstract:

This standard is a revision of and supersedes the Caribbean Community Standard CCS 44: 2003 Requirements for labelling: Labelling of brewery products (beer, stout, shandy, malta) and shall be used in collaboration with the CRS 41 – Brewery products –Specifications.

Beer, stout and other brewery products are produced in many of the Member States of the CARICOM and trade within the Region is increasing. This standard is intended to ensure that the labelling of these products meets the requirements of regulatory authorities.

This standard specifies requirements for the labelling of brewery products to be sold or traded in the CARICOM region. It is not applicable to beverages that are not derived from cereals and are sold under common names, including the words, “beer” and “ale”

EXAMPLE Ginger Beer, Ginger Ale, Root Beer are not covered by the standard.

Goods - Pt. 1	Specification for Labelling of Goods (General Principles): Has been revised and replaced by Labelling of Goods – Part 1 – General requirements	CRS 55 – 1:2016	USD 32.12

Abstract:

This standard was prepared to guide manufacturers and importers on the labelling considered necessary to give adequate information to purchasers for assessing the usefulness of goods. This standard describes general labelling requirements for goods and commodities. It is applicable to all goods and commodities which are customarily labelled in the course of trade, except those for which more specific requirements have been elsewhere prescribed in Caribbean Regional Standards or model Regulations.

<u>Product</u>	<u>Title of Standards or Code of Practice</u>	<u>Standard code</u>	<u>Price</u>
Prepackaged Goods - Pt. 2	Specification for Requirements for Labelling- Labelling of Prepackaged Goods – revised and replaced by Labelling of goods – Part 2: Specific requirements for prepackaged goods	CRS 55 – 2: 2016	USD 36.00

Abstract:

As many goods for retail sale are commonly sold prepackaged by the manufacturer, the packager, or the retailer, it was recognized that provisions for the information to be given on labels or prepackaged goods would help the consumer or purchaser to assess the quality of goods and their relation to his or her needs and resources. It is hoped that this standard will also assist manufacturers in meeting the requirements for labelling imposed on countries outside the Caribbean.

Labelling of prepackaged goods is intended to assist the purchaser or consumer towards an understanding of the nature, quality or use of the goods so that he may judge whether it is adequate for his needs and is of a quality or usefulness for which he judges the price to be acceptable; Enable the manufacturer or retailer to carry out his obligation to describe the goods at the point of sale in a truthful, informative and non- deceptive manner so that no cause for complaint may be found that the goods were wrongly described.

For these reasons, and in order to minimise the confusion that exists in the labelling of different classes of articles so that some are customarily sold with much information, others with little, this standard has been prepared to lay down the basic requirements and basic information that labels should carry.

This standard sets out requirements for the information to be included on labels of goods prepackaged for retail sale, the method of display of such information, and where necessary, the wording and units of measurements to be used.

<i>Product</i>	<i>Title of Standards or Code of Practice</i>	<i>Standard code</i>	<i>Price</i>
Pesticide	Pesticide labelling-requirements	CRS 39: 2022	USD 67.04
<p>Abstract: This CARICOM Regional Standard CRS 39:2022, Pesticide – Labelling has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ).</p> <p>The standard is meant to address the issues related to:</p> <ul style="list-style-type: none"> a) Safety, health and the environment in the transportation, storage, handling, and use of pesticides, and b) Inter-regional market access for pesticides by harmonising product labelling. <p>The label is a primary source for information explaining the identity of and directions for use of a pesticide. Not only does the label state the purpose and conditions of use, it also informs the user of the hazards and risks associated with the use of the pesticide. The label is meant to assist the handler or user in assessing the actual risk of handling and applying the product under specific local conditions. It is, therefore, according to the Food and Agriculture Organization (FAO) of the United Nations, an important tool to protect human health and the environment. Additionally, pesticide labels provide a link for contact between the manufacturer or distributor and the user of the product.</p> <p>The standard is intended to be used by manufacturers, importers, re-packagers, distributors, and retailers of pesticides, as well as consumers and users. The ultimate intent of this standard is the provision of label information, which is appropriate, clear, complete, direct and aligned to international best practices, to all potential and actual users of pesticides.</p>

Soap	Soap Bars – Specification <i>(Replaced - Specification for Toilet Soap and Laundry Soap)</i>	CRS 61: 2017	USD 35.03
<p>Abstract: There are many manufacturers of soap bars throughout the CARICOM Region. These manufacturers range from large, to medium, to small and micro producers. There has also been a tendency for many small business artisans to engage in the production of unique soap bars.</p> <p>A large variety and quantity of soap bars are imported into the region from various parts of the world. Ensuring that such products meet the specifications set out within a regional soap bar standard is of paramount importance.</p> <p>Soap bars are hygienic essentials for everyday use, both in the domestic, hospitality and business settings. This standard is applicable to soap bars which are intended primarily for cleaning. These soap bars utilise conventional ingredients that are available locally, regionally and internationally.</p> <p>This document is intended to guide manufacturers and importers on trade specifications, through the use of established commodity requirements and specifications for trade on the market</p> <p>This document specifies the requirements for toilet and laundry soap bars manufactured, imported or sold in the Caribbean Community (CARICOM).</p> <p>This document is not applicable to medicated soaps, liquid toilet soaps, liquid laundry soaps, antiseptic soaps and disinfectant soaps.</p>

Tobacco Products	Tobacco Products – Advertising, Promotion, Sale and Sponsorship - Requirements	CRS 60: 2023	USD 36.97

Abstract:

This standard specifies requirements for advertising, promotion, sale and sponsorship of tobacco products, electronic nicotine delivery systems (ENDS) and electronic non-nicotine delivery system (ENNDS) throughout the Caribbean Community (CARICOM).

The World Health Organization Framework Convention on Tobacco Control (WHO FCTC) was developed in response to the globalization of the tobacco epidemic. The spread of the tobacco epidemic is facilitated through a variety of complex factors with cross-border effects, including trade liberalization and direct foreign investment. Other factors such as global marketing, transnational tobacco advertising, promotion and sponsorship, and the international movement of contraband and counterfeit cigarettes have also contributed to the increase in tobacco use.

This CARICOM Regional Standard has been developed in response to the obligation of CARICOM Member States to implement Article 13 of the WHO FCTC which supports a total ban on tobacco advertising, promotion and sponsorship.

Toilet tissue	Toilet Tissue - Specification (revision)	CRS 51: 2022	USD 37.94

Abstract:

This standard is a revision of and supersedes the standard CCS 22:1992, *Toilet tissue in rolls, single and two-ply* which was prepared for the Caribbean Common Market Standards Council (CCMSC) and approved in 1992.

This standard has been revised to take into consideration new standardisation practices and changes in the industry. The scope has been extended to include coreless tissue, multi-ply tissue and specific requirements have been included for multi-packs and cartons.

This standard is intended to:

- a) facilitate production of an acceptable quality including minimum performance, dimensional and other parameters.
- b) This standard may be used to provide a basis for conformity assessment activities or as part of a quality assurance scheme.

Amchar and Kuchela	Specification for Amchar and Kuchela	CRS 22: 2010	USD 40.85
<p>Abstract: This CARICOM Regional Standard has been prepared to outline quality and acceptability requirements for the products known and traded within the CARICOM as achar, amchar and kuchela.</p> <p>The manufacture and trade of condiments made from pickled tropical fruits and or vegetables within the CARICOM is increasing due to the commercialisation of these fruits and vegetables and the increased demand in the global food trade. This market growth has also enabled CARICOM processors to produce achar, amchar and kuchela and other pickled fruits and vegetables from designated fruits and vegetables on a commercial scale. It has therefore become necessary to formulate a CARICOM standard to support the trade in these products.</p> <p>Achar, amchar and kuchela are pickled condiments and it is very unlikely that the entire contents of the package will be consumed on the first opening; hence the product should be stored and kept without spoilage after it has been opened.</p> <p>Traditionally, these condiments were made as acidified foods, of pH less than 4.6, so that they could be stored without refrigeration and without spoilage after opening. It is likely that these condiments will be refrigerated; therefore, they can be made as either low acid or acidified foods.</p> <p>The requirements of achar, amchar or kuchela are different depending on whether the product is an acidified food or a low-acid food.</p> <p>This standard applies to the products known as achar, amchar and kuchela which are prepared from edible fruits such as green or unripe mangoes (<i>Mangifera indica</i>), golden apple (<i>Pommecythere spp</i>), june plum (<i>Spondias spp</i>), tamarind (<i>Tamarindus indica</i>) and chalta or elephant fruit (<i>Dillenia indica</i>), as the predominant ingredients and blended with spices and additives prior to packaging.</p>

Water Borne Coatings	Paint – Water Borne Coatings - Specifications replaces Emulsion Paints Water Borne Solutions	CRS 47: 2021	USD 38.91
<p>Abstract: This standard replaces and supersedes CCS 19:1992, Paint – Exterior and interior emulsion type- flat which was prepared by the Caribbean Common Market Standards Council (CCMSC).</p> <p>This standard sets the minimum requirements for water-borne paints for interior and exterior use that are manufactured or traded within the Caribbean Community. It specifies performance as well as physical and chemical requirements for paints.</p> <p>This standard was undertaken to incorporate a reduction in the lead and volatile organic content of paint in alignment with global initiatives to protect the environment and the health and safety of the consumer. The major changes from the previous version of the standard include the following:</p> <ul style="list-style-type: none"> a) addition of new definitions; b) reduction of the maximum content of lead; c) inclusion of a maximum limit for volatile organic compounds; d) the inclusion of referenced test methods; e) inclusion of an Annex that provides recommended gloss level ranges. <p>The labelling requirements outlined in this standard have been extracted from the relevant requirements in the regional labelling standard CRS 55- 2: 2016, Labelling of goods — Part 2: Specific requirements for pre-packaged goods.</p> <p>This standard establishes requirements for water-borne, decorative coatings intended for use on interior and exterior surfaces. It applies to final packaged products, untinted bases and products tinted at the point of sale. It also establishes requirements for characteristics, performance and labelling of coatings and specific parameters for primers and topcoats.</p> <p>This standard is applicable to liquid coatings including emulsion, latex, water-soluble, water-dispersible or colloidal coatings and textured coatings. It does not apply to stains, varnishes, putties and solvent-borne coatings.</p> <p>EXAMPLE Water-borne coatings covered under this standard are intended for use on concrete, brick, stucco, concrete block, wood, metal, off shutter concrete or bituminous substrates, plastic and glass but are not limited to these applications.</p>

Tour Guides	Code of Practice for Tour Guides	CRCP 3: 2010	USD 38.91

Abstract:

This CARICOM Regional Code of Practice recommends practices for the establishment and maintenance of the minimum acceptable level of service for tour guiding. Users of this Code of Practice are encouraged to go beyond the requirements documented here.

This document was developed because of the:

- importance of tourism to the economies of the CARICOM Member States;
- increasing demand for a variety of tours, such as. eco, nature and heritage, and the important role they play in the delivery and enjoyment of the overall tourism product;
- need to ensure that tour guides fully understand their roles and responsibilities so as to provide the highest standard of service towards the enjoyment, information and safety of customers;
- growing realisation that tourism activities and development must be carried out in a sustainable manner; and
- recognition that the positive and negative impacts of tourism on local communities must be properly monitored and managed.

This Code of Practice establishes the minimum acceptable levels of service for tour guides operating within the CARICOM Member States. It is also intended for use as a quality tool by:

- a) tour guides and tourism service providers;
- b) tour parties; and
- c) relevant authorities and agencies responsible for tourism within the CARICOM region.

This Code of Practice does not specify the criteria which are necessary for the licensing of tour guides operating within the CARICOM Member States.

Recreational Water	Guidelines for Recreational Water Quality	CRS 36: 2013	USD 60.25

Abstract:

This guideline document has been prepared to set levels of quality and safety for recreational water of riverine and coastal origin within CARICOM member states.

The purpose of the guideline is to establish criteria for:

- a) ensuring safety of users of recreational waters;
- b) types of use and methods of ensuring compliance;
- c) regulating usage of recreational waters;
- d) promoting economic and ecological sustainability of recreational waters; and
- e) facilitating quality control of recreational waters.

These guidelines prescribe requirements for recreational water quality and apply to a range of public and private recreational water environments, such as coastal, estuarine waters and fresh water bodies in CARICOM member states.

These guidelines also apply to any artificially constructed flow-through impoundment using water from sources described previously. Example Constructed baths at waterfall or constructed river basin.

Swimming pools are subject to specific management practices and regulations intended to protect public health (for example disinfection standards) and are not covered by these guidelines.

These guidelines are set for three main categories of recreational activity:

- Primary contact recreation – where the body can be fully immersed and there is the potential to swallow water, and one is in direct contact with the water. Example Swimming, diving, surfing.
- Secondary contact recreation. There is direct contact with the water but the chance of swallowing water is unlikely or limited. Example: Boating, fishing, wading.
- Passive recreation- no contact with the water and includes scenic appreciation, walking, picnicking, some sports, etc.

Guidelines for recreational quality assessments are also provided in this standard.

Environmental Management Systems	Sustainable Tourism - Environmental Management Systems - Requirements	CRS 66: 2021	USD 63.16
<p>Abstract: This CARICOM Regional Standard <i>CRS 66:2021 Sustainable Tourism – Environmental Management Systems – Requirements</i> has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ).</p> <p>Tourism is a priority in the Caribbean, having one of the highest developmental impact on the region’s economic growth and sustainability, and being an important source of income, employment and foreign exchange. However, the tourism industry can significantly impact natural resources, consumption patterns, and social systems, which in turn can threaten the tourism product. Further, unsustainable consumption and production practices combined with the region’s vulnerability to natural disasters, environmental threats, disease outbreaks and epidemics, and deficiencies in environmental sanitation and food safety, may represent major barriers to sustainable development.</p> <p>According to the World Tourism Organization, sustainable tourism is “Tourism that takes full account of its current and future economic, social and environmental impacts, addressing the needs of visitors, the industry, the environment, and host communities.” A more sustainable tourism sector can contribute to the United Nation’s Sustainable Development Goals (UN SDGs) in 5 key areas - sustainable economic growth; social inclusiveness, employment and poverty reduction; resource efficiency, environmental protection and climate change; cultural values, diversity and heritage; and mutual understanding, peace and security. Advancing sustainable practices in the tourism sector is, therefore, essential if the sector is to contribute effectively to sustainable development of the Caribbean region.</p> <p>Recognising the Caribbean region’s reliance on the tourism industry and its sustainability challenges, seven (7) standards related to Hospitality, Health, Safety and Environmental (HSE) tourism have been developed. These standards have been developed under the ambit of the Regional Tourism and Health Programme (THP) established by the Caribbean Public Health Agency (CARPHA), in partnership with the Caribbean Tourism Organization (CTO) and the Caribbean Hotel and Tourism Association (CHTA). The seven standards constitute a set of preventive interventions to effectively address public health and environmental issues that impact local and visitor populations in the Caribbean and to support sustainable tourism and the region's efforts to remain competitive in the rapidly evolving global tourism trade.</p> <p>This standard is one of the suite of seven (7) standards, which are as follows:</p> <ul style="list-style-type: none"> a) CRS 66, <i>Sustainable Tourism — Environmental Management Systems — Requirements</i> b) CRS 67, <i>Sustainable Tourism — Energy Management and Efficiency — Requirements</i> c) CRS 68, <i>Sustainable Tourism — Food Safety and Sanitation — Requirements</i> d) CRS 69, <i>Sustainable Tourism — Water Treatment, Management and Efficiency — Requirements</i> 			

- e) CRS 70, *Sustainable Tourism — Solid Waste Management — Requirements*
- f) CRS 71, *Sustainable Tourism — Sewage Treatment and Management — Requirements*
- g) CRS 72, *Sustainable Tourism — Integrated Pest Management Systems — Requirements*

This standard is intended to provide a framework for the development of an environmental management system within tourism establishments. The standard covers an EMS that focuses resources on meeting the commitments identified in the organisation’s policy, which could include reducing or eliminating the negative environmental impacts of its products, services, and activities and/or increasing their positive effects.

Energy Management and Efficiency Systems	Sustainable Tourism - Energy Management and Efficiency Systems - Requirements	CRS 67: 2021	USD 54.53

Abstract:

This CARICOM Regional Standard CRS 67: 2021 *Sustainable Tourism — Energy Management and Efficiency — Requirements* has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ).

This standard is intended to provide a framework for the development, implementation, operation, and evaluation of an effective energy management and efficiency system including the potential for use of renewable energy sources in tourism establishments

This standard is one of the suite of seven (7) standards, which are as follows:

- a) CRS 66, *Sustainable Tourism — Environmental Management Systems — Requirements*
- b) CRS 67, *Sustainable Tourism — Energy Management and Efficiency — Requirements*
- c) CRS 68, *Sustainable Tourism — Food Safety and Sanitation — Requirements*
- d) CRS 69, *Sustainable Tourism — Water Treatment, Management and Efficiency — Requirements*
- e) CRS 70, *Sustainable Tourism — Solid Waste Management — Requirements*
- f) CRS 71, *Sustainable Tourism — Sewage Treatment and Management — Requirements*
- g) CRS 72, *Sustainable Tourism — Integrated Pest Management Systems — Requirements*

Food, Safety and Sanitation	Sustainable Tourism - Food Safety and Sanitation - Requirements	CRS 68: 2021	USD 100.99
<p>Abstract: This CARICOM Regional Standard CRS 68: 2021 <i>Sustainable Tourism — Food Safety and Sanitation — Requirements</i> has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ).</p> <p>This standard is intended to provide a framework for establishing food safety and sanitation programmes within the tourism industry. Globalisation of the food industry presents a major challenge to food safety which is complicated by the many diseases spread throughout the food chain from farm to table and across national boundaries. The consequences of unsafe food in the tourism sector in any given Caribbean destination will not only be serious but could be detrimental to the region’s vital tourism industry. Food safety must be ensured through implementation of best practices, consistent monitoring, evaluation and continual improvement.</p> <p>This standard is one of the suite of seven (7) standards, which are as follows:</p> <ul style="list-style-type: none"> a) CRS 66, <i>Sustainable Tourism — Environmental Management Systems — Requirements</i> b) CRS 67, <i>Sustainable Tourism — Energy Management and Efficiency — Requirements</i> c) CRS 68, <i>Sustainable Tourism — Food Safety and Sanitation — Requirements</i> d) CRS 69, <i>Sustainable Tourism — Water Treatment, Management and Efficiency — Requirements</i> e) CRS 70, <i>Sustainable Tourism — Solid Waste Management — Requirements</i> f) CRS 71, <i>Sustainable Tourism — Sewage Treatment and Management — Requirements</i> g) CRS 72, <i>Sustainable Tourism — Integrated Pest Management Systems — Requirements</i>

Integrated Pest Management	Sustainable Tourism - Integrated Pest Management Systems- Requirements	CRS 72:2021	USD 51.52
<p>Abstract: This CARICOM Regional Standard <i>CRS 72: 2021 Sustainable Tourism — Integrated Pest Management Systems — Requirements</i> has been developed under the authority of the CARICOM Regional Organisation for Standards and Quality (CROSQ).</p> <p>This standard is intended to provide a framework for establishing integrated pest management programmes in the tourism industry. Inadequate pest management in tourism establishments can lead to contamination of food and transmission of disease to guests and staff. Integrated Pest management (IPM) aims to achieve sustainable pest management by applying a systematic and environmentally sensitive approach to prevent pests by emphasising the use of materials and methods (biological and physical) that minimise the impact on people and the environment and limiting the use of pesticides. Implementation of an IPM programme reduces exposure of tourists and hotel staff to pesticides and other chemicals potentially injurious to health. IPM is preferred as best practice to solve pest problems while minimizing risk to persons and the environment allowing for responsible management and use of chemicals (UN SDG12 – Responsible Consumption and Production) and reduced illness from pollution (UN SDG 3 – Good Health & Wellbeing)</p> <p>This standard is one of the suite of seven (7) standards, which are as follows:</p> <ul style="list-style-type: none"> a) CRS 66, <i>Sustainable Tourism — Environmental Management Systems — Requirements</i> b) CRS 67, <i>Sustainable Tourism — Energy Management and Efficiency — Requirements</i> c) CRS 68, <i>Sustainable Tourism — Food Safety and Sanitation — Requirements</i> d) CRS 69, <i>Sustainable Tourism — Water Treatment, Management and Efficiency — Requirements</i> e) CRS 70, <i>Sustainable Tourism — Solid Waste Management — Requirements</i> f) CRS 71, <i>Sustainable Tourism — Sewage Treatment and Management — Requirements</i> g) CRS 72, <i>Sustainable Tourism — Integrated Pest Management Systems — Requirements</i>
